

ABSTRACT OF THE DISCLOSURE

A gaming device and a method for operating a gaming device which increases the possibility of obtaining a winning combination of symbols on reels. In one embodiment, the gaming device rearranges one or more sets of
5 indicated symbols on the reels to potentially generate additional combinations of symbols on a payline. The rearranged symbols may move to different reels and different paylines in the rearrangement. The gaming device, in one embodiment performs an evaluation of the rearranged symbols after each rearrangement to give each rearrangement a chance to generate a winning
10 combination of symbols on the reels.
